

Joseph Orlando

Technical leader with 14+ years of experience building and operating enterprise SaaS platforms at scale. Deep background across cloud infrastructure, developer platforms, and Salesforce ISV ecosystems. Proven ability to drive organizational-level architectural decisions, lead and mentor engineering teams, and deliver measurable cost and operational impact. Comfortable operating as both a hands-on architect and an engineering leader — having held both individual contributor and management roles throughout my career.

Experience

Conga — Orlando / Remote, FL

Principal Software Engineer Feb 2025 - Present

Technical leader embedded within the DevOps and SRE organization, providing hands-on architectural guidance across software delivery and runtime operations for a global team building a suite of SaaS applications. Work spans both platform-level concerns and direct collaboration with application engineering teams on runtime architecture.

- Leading technical design of reusable, composable CI/CD components, release workflows, and infrastructure-as-code modules; establishing consistent software delivery standards organization-wide
- Advising engineering teams directly on runtime and language-level architecture: native multi-threading and threadpool strategies, async queue and event-driven patterns, RPC architecture, and cloud-managed messaging (queues, topics, pub/sub) as they apply to each team's native stack
- Guiding autoscaling design grounded in runtime behavior — threadpool saturation, connection pool limits, GC pressure — rather than infrastructure metrics alone
- Driving observability standards including custom metrics instrumentation, SLI/SLO definition, and APM integration
- Contributing to adoption of agentic AI workflows across the engineering organization
- Contributed to cost optimization initiatives resulting in savings exceeding **\$1MM/yr**

Manager, DevOps Oct 2022 - Feb 2025

Led a team of on-shore and off-shore DevOps engineers providing global operations coverage across AWS, Azure, and IBM Cloud. Owned the DevOps technical roadmap, sprint planning, and release delivery architecture for a multi-application SaaS portfolio.

Staff Software Engineer Sep 2021 - Oct 2022

Senior Software Engineer Feb 2020 - Sep 2021

- Led architectural design and development of onboarding and setup wizard interfaces for Salesforce Managed Packages, enabling rapid administrator adoption and saving thousands of hours across the customer base
- Independently architected and executed a post-acquisition migration of a prominent document generation application from legacy hosting to AWS — delivering the full infrastructure-as-code, migration plan, and technical architecture, contributing to savings of over **\$100K/yr**
- Contributed to organization-wide standards for microservices, Docker containerization, and Kubernetes adoption
- Drove observability initiatives across the organization, including third-party APM tooling and self-hosted appliances
- Internal advocate for CNCF-supported projects
- Significant contributor to the flagship eSignature SaaS product: document generation, PDF manipulation, and cryptographic signatures

Software Development Engineer Sep 2016 - Feb 2020

Significant contributor to the flagship CLM hybrid Salesforce Managed Package. Designed Visualforce and Lightning user interfaces, data models, and integration flows. Led integration between CLM applications hosted on AWS and the Salesforce platform.

Spring Boot · Java EE · AWS · Salesforce Managed Packages

Siemens — Orlando, FL

Programmer Analyst Jan 2015 - Sep 2016

Salesforce developer supporting an enterprise, multi-national CRM environment in an agile setting.

- Built testing automation infrastructure for continuous integration using Java and Selenium WebDriver
- Developed responsive web applications using Bootstrap on Visualforce for Force.com Sites and Salesforce Communities
- Member of one of the first teams within Siemens to formally adopt Agile methodology

Salesforce · Java · Selenium WebDriver · Bootstrap · Visualforce

BadBoy Computers, Inc. — Central Florida

Software Engineer Feb 2012 - Jan 2015

- Developed and maintained client-commissioned web applications with mobile counterparts on Google Play and Apple App Store
- Architected virtualization clusters using VMware ESXi and KVM supporting shared and dedicated web hosting operations
- Designed custom CRM systems with Quickbooks and telephony/SMS integrations; built relational databases and highly-configurable PHP applications

Service Technician / Sales Representative Feb 2012 - Dec 2014

Assessed and repaired client systems across servers, workstations, laptops, and mobile devices. Provided technology consulting for hardware purchases and handled vendor purchasing and inventory management.

Education

Bachelor of Science, Computer Science — University of Central Florida 2014 - 2019

Associate of Arts — Daytona State College 2013 - 2014 — Dean's List

Certifications

- AWS Certified Security Specialty — Amazon Web Services (AWS)
 - AWS Certified Solutions Architect - Associate — Amazon Web Services (AWS)
 - Certified Kubernetes Application Developer — Cloud Native Computing Foundation (CNCF)
 - Platform Developer II — Salesforce
 - Platform Developer I — Salesforce
 - Development Lifecycle and Deployment Designer — Salesforce
 - Conga Sign Certified Administrator — Conga
 - Engineering Technology Certification — NOCTI
